

# Thoughts on A photochemical dehydrogenative strategy for aniline synthesis

Owen Lockwood

August 25, 2020

I found this paper to be interesting because of its differing approach to synthesis. As I just finished up Organic Chemistry I/II before reading this paper I was able to more fully appreciate the difficulties and problems in the current methods of synthesis. However, I do not know if this work will truly revolutionize the synthesis process, as although it offers significant power, the techniques are not always trivial.
